

REVAN ABUSHOV

Backend Developer — Java & Spring Boot

Baku, Azerbaijan | +994 77 327 0042 | abusovrvan34@gmail.com | [LinkedIn](#) | [GitHub](#) | [Medium](#)

PROFESSIONAL SUMMARY

Java Backend Developer with practical expertise in **Spring Boot, microservices architecture, and Docker**. Proven experience in developing secure RESTful APIs, integrating **Kafka** messaging, and writing testable code following Clean Architecture principles. **IDDA x Ironhack Bootcamp** graduate with hands-on experience in full-cycle backend development.

TECHNICAL SKILLS

Languages & Frameworks: Java, Golang, Spring Boot, Spring Data JPA, Spring Security (JWT), Hibernate

Architecture: Microservices, RESTful APIs, MVC, Clean Architecture, Design Patterns, SOLID Principles

Messaging & Data: Apache Kafka (event-driven architecture), RabbitMQ, PostgreSQL, MySQL, SQL

DevOps & Cloud: Docker, Docker Compose, CI/CD Pipelines (GitHub Actions), Render, Vercel, Git/GitHub

Microservices Infra: Service Discovery (Spring Cloud Netflix Eureka), API Gateway (Spring Cloud Gateway)

Testing & Docs: JUnit 5, Mockito, Integration Testing, Swagger/OpenAPI

Practices: Agile/Scrum, Data Structures & Algorithms, Code Review, Git Workflows

EXPERIENCE

Brain Solutions — Backend Developer / Software Engineer *Aug 2026-Present*

- Developed backend services for an email platform using Go.
- Designed and implemented RESTful APIs for core email and user-management functionality.
- Implemented business logic and modular backend components following clean and maintainable architecture principles.
- Worked with concurrent operations and Go's built-in concurrency mechanisms where required.
- Integrated backend services with persistent storage and external components

FlyRank AI — AI Engineering Intern (*Remote*) *Jun 2026 – Aug 2026*

- Developed practical backend solutions for AI-powered applications, with a focus on Retrieval-Augmented Generation (RAG) systems and AI agent integrations.
- Designed and implemented APIs for AI agents, enabling communication between backend services, AI models, and external components.
- Independently developed a capstone project within a fully remote, flexible engineering environment and delivered the final solution in a portfolio-ready format.
- Gained hands-on experience in backend architecture, AI integration, API design, and production-oriented AI engineering workflows.

Freelance Backend Developer *Mar 2026-Present*

- Developed and integrated Java-based backend APIs and endpoints for a sales platform based on client requirements.
- Implemented business-specific API functionality and integrated backend services with the platform's existing components.
- Translated client requirements into structured backend solutions, focusing on API reliability, maintainability, and clean implementation.
- Worked independently across the development lifecycle, from understanding requirements to implementing and integrating backend functionality.

BOOTCAMP TRAINING

IDDA x Ironhack — Web Development *Feb 2026 – Jul 2026*

- Completed intensive weekly technical labs focused on backend logic, system integration, and database optimization.
- Built end-to-end applications in an Agile environment following industry-standard coding practices and Git workflows.
- Built secure RESTful APIs with JWT authentication, role-based authorization, validation, exception handling, and API documentation using Swagger/OpenAPI.
- Containerized applications with Docker and automated build, testing, and deployment workflows using GitHub Actions (CI/CD).
- Mastered the Spring Boot ecosystem and Microservices architecture through practical, project-based learning.
- Leveraged AI-assisted development tools to accelerate development, debugging, and code quality while following industry best practices.

PROJECTS

Clinify | Clinic Management System | Backend Developer

[Live demo](#)

- Designed and implemented REST controllers with method-level security via, enforcing role-based access across 5 user roles (Admin, Doctor, Receptionist, Patient)
- Built JWT-based authentication and authorization layer, resolving role-claim population issues to ensure accurate access control at the controller level
- Wrote integration tests with isolated TestSecurityConfig to bypass JWT filter interference, covering over 70% of controller and security-filter logic
- Documented all REST endpoints with Swagger/OpenAPI, reducing frontend-backend integration back-and-forth by an estimated 30%

Restaurant Management System | Backend Developer

- Implemented Spring Security with JWT and @PreAuthorize annotations at the controller level to enforce role-based access for Admin, Waiter, and Customer roles
- Designed Spring Data JPA entity relationships across 6+ entities with complex mappings ensuring referential integrity for reservation and order data
- Built and tested 15+ RESTful endpoints via Postman for reservation and order-management workflows
- Structured the codebase using Clean Architecture and Maven, separating controller, service, and repository layers to improve maintainability

TickFlow — Task Management System | Backend Developer

- Developed secure REST controllers with Spring Security, applying checks to restrict task-status transitions by user role
- Automated build, test, and deployment via GitHub Actions CI/CD pipeline, cutting manual deployment steps from 5 to a single push-triggered workflow
- Containerized the application with Docker, ensuring consistent environment parity between local and Render production deployments

- Structured the project with Clean Architecture to decouple controller logic from business rules, easing future feature additions

Film-khana — Movie Management System | Java Backend Developer

- Built REST controllers handling full CRUD operations for movies, genres, and user interactions with layered validation
- Designed DTO and Mapper layers to decouple controller responses from entity models, reducing payload size and over-fetching in API responses
- Optimized entity relations and indexed queries, reducing average query response time by roughly 20%

EDUCATION

University of Economics — B.Sc. in Information Technologies

CERTIFICATIONS

[Master the fundamentals and advanced features of the Go Programming Language \(Golang\)](#) — *Aug 2026*

Go fundamentals, interfaces, concurrency, error handling, and backend development.

[Sifirdan Sona Java, Udemy \(Sarkhan Rasullu\)](#) — *Jul 2026*

Java Core, control flow, OOP, and Spring Boot fundamentals through applied coding exercises and mini projects.

[Object-Oriented Programming in Java, Coursera](#) — *Aug 2025*

OOP principles (encapsulation, abstraction, inheritance, polymorphism), Java Collections Framework, and File I/O.

LANGUAGES

Azerbaijani: Native

English: Upper-Intermediate

Russian: Intermediate
